## **HYTEX ANNOUNCES “GREEN ACOUSTICAL WALLCOVERING” INITIATIVE**

*Creating premium fabrics from post-consumer recycled plastic bottles*

RANDOLPH, MA – Hytex Industries, a worldwide leader of high-performance woven and acoustical needlepunch fabrics for the commercial wallcovering and panel/partition market is pleased to announce completion of their conversion to up to 100% post-consumer recycled content for all acoustical nonwovens.

According to Richard Blosz, Hytex’s Executive Vice-President, “We have completed conversion to EcoSpun®, a high quality polyester fiber made from certified recycled plastic PET bottles. Previously, components were a combination of virgin resin, post-industrial resin, and post-consumer resin. We were never able to certify a minimum percentage of post-consumer content that would assist in contributing towards LEED requirements. With EcoSpun®, we are post-consumer, 100% of the time.”

“EcoSpun® is leading the way to green manufacturing in the textile industry.”

Hytex acoustical nonwovens include Bedford, OziteRib®, WhisperTex, Impressions, and HytexRib® collections. For additional information, contact manufacturer at 781-963-4400.
